Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms, definitions, and abbreviated terms	2
3.1 Terms and definitions	2
3.2 Abbreviated terms	2
4 Principle	2
5 Sampling	3
6 Measuring method of biobased carbon content by determination of ^{14}C content	3
6.1 General	3
6.2 Sample preparation and two methods to determine ^{14}C concentration	4
6.3 Calculation of the biobased carbon content	4
6.3.1 General	4
6.3.2 Correction factor	4
6.3.3 Calculation of $\chi_{\text{B}}^{\text{TC}}$, the biobased carbon content by Method A (AMS)	5
6.3.4 Calculation of $\chi_{\text{B}}^{\text{TC}}$, the biobased carbon content by Method B (LSC)	6
6.3.5 Examples	6
7 Precision	6
8 Test report	6
Annex A (normative) Method A — Determination by accelerator mass spectrometry (AMS)	7
Annex B (normative) Method B — Determination by liquid scintillation counter (LSC)	10
Annex C (informative) Examples of the determination of biobased carbon content	13
Annex D (informative) Determination of the biobased carbon content of a tyre	14
Annex E (informative) Precision results from an interlaboratory test programme	17
Bibliography	19

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 2, *Testing and analysis*.

A list of all parts in the ISO 19984 series can be found on the ISO website.

This second edition cancels and replaces the first edition (ISO 19984-2:2017), which has been technically revised.

The main changes are as follows:

- REF values after 2020 have been added in [Table 2](#);
- several bibliographic entries have been added.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
