AMENDMENT 1
2021-11

**Road vehicles — Information for
remote diagnostic support — General
requirements, definitions and use
cases**

AMENDMENT 1

*Véhicules routiers — Information pour support de diagnostic à
distance — Exigences générales, définitions et cas d'utilisation*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 22, *Road vehicles*, Subcommittee SC 31, *Data communication*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Annex A (informative)

Implementation based on ISO 20078 – Road Vehicles – Extended Vehicle (ExVe) – Web Services

A.1 Introduction

A.1.1 General

This annex contains a web service specification of the use cases listed in this document. The web service specification is based on the ISO 20078:2021 series. All web services are defined as REST APIs, using JSON for the transfer of content.

The ISO 20078:2021 series is indispensable for implementing web services according to this annex.

A.1.2 Security

All REST APIs are using OAuth2 compatible framework for access control, OpenID Connect compatible framework for identification purposes and HTTPS for securing the transfer, see ISO 20078-3:2021 for details. The exact details of how to obtain access is described by each offering party.

A.1.3 Error codes

A.1.3.1 ISO 20078

The HTTP status codes (error codes) listed for each REST API are described in ISO 20078-2:2021.

A.1.3.2 General error conditions

General error conditions are valid for all use cases. [Table A.1](#) presents the mapping of error conditions in 5.5 to REST API errors:

Table A.1 — Mapping of error conditions to REST API

Error condition	HTTP status code	ExveErrorId	Example
Request currently not possible to perform by the ExVe	503	20080-1000	<pre>{ "dtcReadout": { "id": "abcde-12345-ghjke-67474", "messageTimestamp": "2016-02-24T09:23:46Z", "exveErrorId": "20080-1000", "exveErrorMsg": "Request currently not possible to perform by the ExVe", "vehicleId": "12345678909876543" } }</pre>

A.1.3.3 Use case specific error conditions

Use case specific errors are mapped to HTTP status codes in each REST API.

A.2 Resources

A web service is exposing access to one or more resources. To be able to access a resource through a web service, access needs to be granted. This can be done either directly to the resource or through a container.

[Table A.2](#) maps the ISO 20080 (this document) use cases to REST APIs and resources. In some cases, mapping of a use case to a REST API provides little standardization benefit, as it is highly offering party specific.

Table A.2 — Mapping of use cases to REST APIs

UC	Use case name	REST API	Resource(s)	Comment
01	Use case discovery	resourceReadout	Not applicable	
02	Identify ECUs installed in the vehicle	ecuReadouts	ECU readout	
03	Read diagnostic trouble codes (DTCs)	dtcReadouts	DTC readout	
04	Read readiness codes	readinessCodeReadouts	Readiness code readout	
05	Read DTC snapshot data	dtcSnapshotReadout	DTC snapshot readout	
06	Read selected diagnostic parametric dynamic data	parameterReadout	Parameter readout	
07	Read malfunction indicator status	malfunctionIndicatorReadout	Malfunction indicator readout	
08	Clear DTCs	clearDtcJob	Clear DTC job	
09	Adjust the settings of a selected system	Not applicable/no standardized API due to differences between offering parties.	Not applicable	System setting input and result are offering party specific.
10	Activation of actuators	Not applicable/no standardized API due to differences between offering parties.	Not applicable	Actuator input and result are offering party specific.
11	Activate a self-test routine	Not applicable/no standardized API due to differences between offering parties.	Not applicable	Self-test input and result are offering party specific.

ISO 20078-2:2021 defines new syntax for resource versioning (used in Accept and Content-Type HTTP headers). Existing implementations of ISO 20080 based on the ISO 20078:2019 series version can still be used. For new implementations, support of the ISO 20078:2021 series is recommended (see [Table A.3](#) for details).
