## Installation and equipment for liquefied natural gas — Design of floating LNG installations —

### Part 1: General requirements

*Installations et équipements de gaz naturel liquéfié — Conception des  
installations flottantes de GNL —*

*Partie 1: Exigences générales*

| 3.2 Abbreviated terms                                                           | 8           |
| <b>4 Basis of design</b>                                                        | <b>11</b>   |
| 4.1 Site and meteocean conditions                                               | 11          |
| 4.1.1 Site study                                                                | 11          |
| 4.1.2 Earthquake                                                                | 13          |
| 4.1.3 Location                                                                  | 13          |
| 4.1.4 Other studies                                                             | 14          |
| 4.2 Design criteria                                                             | 14          |
| 4.2.1 General                                                                   | 14          |
| 4.2.2 Topsides                                                                  | 15          |
| 4.2.3 Transfer systems                                                          | 16          |
| 4.2.4 Hull                                                                      | 20          |
| 4.2.5 LNG storage                                                               | 22          |
| 4.2.6 Mooring                                                                   | 23          |
| 4.2.7 Pipe-work                                                                 | 25          |
| <b>5 Health, safety and the environment</b>                                     | <b>26</b>   |
| 5.1 General                                                                     | 26          |
| 5.1.1 Main objectives                                                           | 26          |
| 5.1.2 Main principles                                                           | 27          |
| 5.2 Identification of safety and environmental barriers and design requirements | 27          |
| 5.2.1 General                                                                   | 27          |
| 5.2.2 Purpose                                                                   | 28          |
| 5.2.3 Safety and environmental barriers                                         | 28          |
| 5.2.4 Generic barriers                                                          | 29          |
| 5.2.5 Safety and environmental barriers identification process                  | 29          |
| 5.2.6 Safety and environmental barriers design requirements                     | 30          |
| 5.2.7 Safety and environmental barriers design requirements certification       | 31          |
| 5.3 Environmental considerations                                                | 31          |
| 5.3.1 General                                                                   | 31          |
| 5.3.2 Floating LNG installations specificities                                  | 31          |
| 5.3.3 Environmental aspects identification                                      | 32          |
| 5.3.4 Environmental design review                                               | 32          |
| 5.3.5 Environmental design requirements                                         | 32          |
| 5.4 Safety considerations                                                       | 39          |
| 5.4.1 General                                                                   | 39          |
| 5.4.2 Safety strategies and philosophies                                        | 40          |
| 5.4.3 Safety reviews                                                            | 40          |
| 5.4.4 Qualitative risk assessment, QRA and specific safety studies              | 43          |
| 5.4.5 Risk prevention measures (typical list)                                   | 47          |
| 5.4.6 Emergency response                                                        | 60          |
| 5.5 Occupational health and industrial hygiene considerations                   | 62          |
| 5.5.1 Occupational health and industrial hygiene aspects identification         | 62          |
| 5.5.2 Chemical exposure                                                         | 62          |
| 5.5.3 Biological factor                                                         | 63          |
| 5.5.4 Legionella                                                                | 64          |
| 5.5.5 Thermal stress                                                            | 64          |

|          |                                                                                                    |           |
|----------|----------------------------------------------------------------------------------------------------|-----------|
| 5.5.6    | Hot/cold surfaces.....                                                                             | 65        |
| 5.5.7    | Support functions to operators - Project with permanent operators on-board or in the facility..... | 65        |
| 5.5.8    | Lighting.....                                                                                      | 65        |
| 5.5.9    | Water availability and quality intended for human consumption.....                                 | 66        |
| 5.5.10   | Noise and vibration.....                                                                           | 66        |
| 5.6      | Ergonomics and human factor.....                                                                   | 68        |
| <b>6</b> | <b>Mooring and stationkeeping.....</b>                                                             | <b>68</b> |
| 6.1      | General.....                                                                                       | 68        |
| 6.2      | Permanent stationkeeping in open waters.....                                                       | 69        |
| 6.2.1    | Stationkeeping concepts.....                                                                       | 69        |
| 6.2.2    | Design requirements.....                                                                           | 70        |
| 6.3      | Permanent stationkeeping in nearshore or docked conditions.....                                    | 70        |
| 6.3.1    | Stationkeeping concepts.....                                                                       | 70        |
| 6.3.2    | Design requirements.....                                                                           | 71        |
| 6.3.3    | Emergency departure of floating LNG installation.....                                              | 72        |
| 6.4      | Mooring systems for special project design conditions.....                                         | 72        |
| 6.4.1    | Disconnectable mooring.....                                                                        | 72        |
| 6.4.2    | Permanent mooring for a limited project life.....                                                  | 73        |
| 6.5      | Short-duration mooring of a visiting LNGC for loading/unloading.....                               | 73        |
| 6.5.1    | General.....                                                                                       | 73        |
| 6.5.2    | Ship-to-ship mooring in open waters.....                                                           | 74        |
| 6.5.3    | Mooring in docked or nearshore conditions.....                                                     | 74        |
| 6.5.4    | Mooring to an SPM terminal.....                                                                    | 74        |
| 6.5.5    | Design requirements.....                                                                           | 74        |
| 6.6      | Infrastructure design for jetty moorings.....                                                      | 75        |
| 6.6.1    | General.....                                                                                       | 75        |
| 6.6.2    | Jetty elevation.....                                                                               | 75        |
| 6.6.3    | Corrosion protection of the marine infrastructure.....                                             | 75        |
| 6.6.4    | LNG spillage containment.....                                                                      | 76        |
| 6.6.5    | Power supply from/to jetty to the FSRU/FLNG.....                                                   | 76        |
| 6.6.6    | Navigation aids.....                                                                               | 76        |
| 6.6.7    | Emergency response and evacuation route.....                                                       | 76        |
| 6.7      | Transfer of material and personnel.....                                                            | 76        |
| <b>7</b> | <b>Hull design.....</b>                                                                            | <b>77</b> |
| 7.1      | Hull structural design.....                                                                        | 77        |
| 7.1.1    | Design philosophy.....                                                                             | 77        |

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 67, *Materials, equipment and offshore structures for petroleum, petrochemical and natural gas industries*, Subcommittee SC 9, *Liquefied natural gas installations and equipment*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 282, *Installation and equipment for LNG*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

A list of all parts in the ISO 20257 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).

This corrected version of ISO 20257-1:2020 incorporates the following corrections:

- the broken links in References [50] and [51] were updated;
- the missing content in 5.1.2, 5.4.3.2.3, and 5.5.10.2 was added;
- editorial corrections in 12.2.2.2, G.1.2.1, G.2.1 and in the bibliography.
