Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	2
5 Sampling	3
6 Determination of the combustion energy of biobased and non-biobased materials	3
6.1 General	3
6.2 Reagents and materials	3
6.3 Apparatus	3
6.4 Procedure	6
6.5 Calculation method of biobased and non-biobased combustion energy	7
7 Determination of the amount of carbon dioxide emission from biobased and non-biobased materials	7
7.1 General	7
7.2 Apparatus	7
7.3 Reagents	8
7.4 Procedure	8
7.4.1 Verification of the measurement	8
7.4.2 Transfer of the combustion gas to a gas sampling bag from bomb	9
7.4.3 Measurement of carbon dioxide concentration by GC	9
7.4.4 Determination of the total volume of the combustion gas	10
7.4.5 Measurement of the room temperature and the atmospheric pressure	11
7.4.6 Calculation of the amount of carbon dioxide emission	11
7.5 Calculation of biobased and non-biobased carbon dioxide emission	12
8 Precision	12
9 Test report	12
Annex A (informative) Calculation of net calorific value for combustion energy	13
Annex B (informative) Examples of determination of combustion energy of biobased and non-biobased materials	15
Annex C (normative) Saturated water vapour pressure	16
Annex D (informative) Determination of the amount of carbon dioxide emission from biobased and non-biobased materials	17
Annex E (informative) Precision	18
Bibliography	20

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 45, *Rubber and rubber products*, Subcommittee SC 2, *Testing and analysis*.
