

**International
Standard**

ISO 20468-10

**Performance evaluation of
treatment technologies for water
reuse systems —**

**Part 10:
Guidelines for evaluation of
dependability of treatment systems**

*Évaluation des performances des techniques de traitement des
systèmes de réutilisation de l'eau —*

*Partie 10: Lignes directrices pour l'évaluation de la sûreté de
fonctionnement des systèmes de traitement*

**First edition
2025-12**

Foreword.....iv

Introduction.....v

1 Scope.....1

2 Normative references.....1

3 Terms, definitions, and list of abbreviated terms.....1

3.1 Terms and definitions.....1

3.2 Abbreviated terms.....3

4 Concept of dependability evaluation of treatment systems.....3

4.1 Dependability evaluation by availability.....3

4.2 Treatment system and critical unit processes as performance control points (PCPs).....3

5 Evaluation procedure for dependability of treatment systems.....4

5.1 General.....4

5.1.1 Setting boundary for dependability evaluation.....4

5.1.2 Setting PCPs.....4

5.1.3 Availability assessment of PCPs.....4

5.1.4 Availability assessment of treatment system.....4

5.2 Setting PCPs, confirming requirements and defining failure state.....5

5.3 Qualitative assessment of availability.....5

5.4 Quantitative assessment of availability.....6

Annex A (informative) Examples of maintenance strategy as benchmark for qualitatively assessing availability applied to key technologies.....7

Annex B (informative) Example of quantitative assessment of availability.....11

Bibliography.....12

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 282, *Water reuse*, Subcommittee SC 3, *Risk and performance evaluation of water reuse systems*.

A list of all parts in the ISO 20468 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
