| <b>4 Symbols and abbreviated terms</b>                                         | <b>3</b>  |
| <b>5 Specifications and requirements</b>                                       | <b>3</b>  |
| 5.1 Basic functions                                                            | 3         |
| 5.2 Necessary functions                                                        | 4         |
| 5.3 Basic operation principle                                                  | 4         |
| 5.3.1 State functional descriptions                                            | 5         |
| 5.3.2 Operational limits                                                       | 6         |
| 5.4 Alert functionality                                                        | 6         |
| 5.4.1 General                                                                  | 6         |
| 5.4.2 Generating the message including emergency braking flag for broadcasting | 6         |
| 5.4.3 Judging to issue the alert                                               | 6         |
| 5.5 Alerting element requirements                                              | 7         |
| 5.5.1 EEBL-R output                                                            | 7         |
| 5.5.2 Alert modality                                                           | 7         |
| 5.5.3 Optional functions of EEBL-R                                             | 7         |
| 5.6 Performance requirement of EEBL                                            | 8         |
| 5.6.1 Minimum communication range                                              | 8         |
| 5.6.2 System delay requirement between FV and SV                               | 8         |
| 5.7 Driver interface requirements                                              | 8         |
| 5.7.1 Alert output specification                                               | 8         |
| 5.7.2 Fault indication                                                         | 8         |
| <b>6 Performance evaluation test methods</b>                                   | <b>8</b>  |
| 6.1 Environmental conditions for test                                          | 8         |
| 6.2 Test course conditions                                                     | 9         |
| 6.3 Test system installation and configuration                                 | 9         |
| 6.4 Parameters recoverable from data record                                    | 9         |
| 6.5 Test cases                                                                 | 9         |
| 6.6 Test procedure                                                             | 10        |
| 6.6.1 Test case 1 — FV transmission test and delay measurement                 | 10        |
| 6.6.2 Test case 2 — False positive test                                        | 12        |
| 6.6.3 Test case 3 — True positive test                                         | 13        |
| 6.6.4 Test case 4 — Test when there is interfering vehicle (IV)                | 14        |
| 6.6.5 Test case 5 — Basic communication function test                          | 16        |
| <b>Bibliography</b>                                                            | <b>18</b> |

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 204, *Intelligent transport systems*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).
