| <b>4 Technical requirements</b>                                                                                  | <b>2</b>  |
| 4.1 Major components of ETA                                                                                      | 2         |
| 4.2 Design arrangement of ETA                                                                                    | 2         |
| 4.3 Design and manufacturing requirements for major components                                                   | 3         |
| 4.3.1 Minimum strength requirement for ETA components                                                            | 3         |
| 4.3.2 Strength requirement for other parts                                                                       | 3         |
| 4.3.3 Bow ETA                                                                                                    | 3         |
| 4.3.4 Stern ETA                                                                                                  | 5         |
| <b>5 Test method</b>                                                                                             | <b>7</b>  |
| 5.1 Bow ETA                                                                                                      | 7         |
| 5.1.1 Prototype strength test for the bow ETA                                                                    | 7         |
| 5.1.2 Fairlead                                                                                                   | 7         |
| 5.1.3 Chain stopper                                                                                              | 7         |
| 5.1.4 Chafing chain                                                                                              | 8         |
| 5.1.5 Pedestal roller                                                                                            | 8         |
| 5.2 Stern ETA                                                                                                    | 8         |
| 5.2.1 Strength test for the stern ETA                                                                            | 8         |
| 5.2.2 Fairlead                                                                                                   | 8         |
| 5.2.3 Towing rope                                                                                                | 8         |
| 5.2.4 Stopper ring                                                                                               | 9         |
| 5.2.5 Strong point                                                                                               | 9         |
| 5.2.6 Storage container for the pick-up gear                                                                     | 9         |
| 5.2.7 Storage winch                                                                                              | 9         |
| 5.3 Function test                                                                                                | 9         |
| <b>Annex A (informative) Type and dimensions of a fairlead</b>                                                   | <b>10</b> |
| <b>Annex B (informative) Chemical composition and mechanical properties of steel bars for ship anchor chains</b> | <b>11</b> |
| <b>Annex C (informative) Types and dimensions of chafing chains</b>                                              | <b>12</b> |
| <b>Annex D (informative) Types and dimensions of chain stoppers</b>                                              | <b>14</b> |
| <b>Annex E (informative) Type and dimensions of a towing rope</b>                                                | <b>17</b> |

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 8, *Ships and marine technology*, Subcommittee SC 4, *Outfitting and deck machinery*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).
