
**Optics and photonics — Test method
for refractive index of optical
glasses —**

**Part 1:
Minimum deviation method**

*Optique et photonique — Méthode d'essai pour déterminer l'indice de
réfraction des verres optiques —*

Partie 1: Méthode de la déviation minimale

Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	1
5 Measuring apparatus	2
5.1 General construction	2
5.2 Goniometer	3
5.3 Light source	3
5.4 Detector	4
6 Specimen prism	4
6.1 General	4
6.2 Dimensions	5
6.3 Apex angle	5
6.4 Flatness	5
7 Environmental condition of measurement	5
7.1 Temperature	5
7.2 Humidity	5
7.3 Atmospheric pressure	5
8 Measurement	6
8.1 Adjustment of the measurement specimen prism	6
8.2 Measurement of the apex angle, α	6
8.3 Measurement of the angle of minimum deviation, $\delta_{\min}$	7
9 Indication	8
10 Test report	8
Annex A (informative) Calculation of principal dispersion, Abbe number, partial dispersion and relative partial dispersion	9
Annex B (informative) Dispersion formulae for calculation of refractive index at arbitrary wavelength	12
Annex C (informative) Correction of refractive index for temperature, humidity and atmospheric pressure	14
Annex D (informative) Other measurement methods of the apex angle	16
Annex E (informative) Other measurement methods of the angle of minimum deviation	18
Bibliography	21

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 172, *Optics and photonics*, Subcommittee SC 3, *Optical materials and components*.

A list of all parts in the ISO 21395 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
