Foreword	v
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Requirements	2
4.1 Requirements on the sample.....	2
4.2 Requirements on the sample transfer and measurement system.....	2
5 Measuring instruments	3
6 Environment	3
7 Sample transfer and measurement system	3
7.1 General.....	3
7.2 System structure.....	3
7.3 Arrangement of components.....	3
7.3.1 Position of the inlet tube mouth.....	3
7.3.2 Position of the measuring instrument.....	3
7.4 Retention container.....	4
7.4.1 General.....	4
7.4.2 Configuration requirements for retention container.....	4
7.5 Loading tube.....	5
7.5.1 Loading tube inner diameter.....	5
7.5.2 Loading tube length.....	5
7.5.3 Curvature of the loading tube.....	5
7.5.4 Surface roughness.....	5
7.5.5 Loading tube materials.....	5
7.5.6 Suppression of loading tube sway.....	5
7.6 Loading pump.....	5
7.6.1 General.....	5
7.6.2 Flow rate (Flow velocity).....	5
7.7 Retention time.....	6
7.8 Dispersion before/during sampling for microbubbles with shell.....	6
8 Procedure	7
9 Data acquisition	7
9.1 General.....	7
9.2 Measurement time.....	8
9.3 Number of measurements.....	8
9.4 Size category.....	8
9.5 Results.....	8
9.6 Calibration and traceability.....	8
9.7 Uncertainty evaluation.....	8
10 Correction	8
10.1 General.....	8
10.2 Reserved water used for blank preparation.....	8
11 Report	9
Annex A (informative) Example of microbubbles without shell measurement using dynamic image analysis	10
Annex B (informative) Effect of setting arrangement	14
Annex C (informative) Example of corrected data by subtraction of blank water	18

Annex D (informative) Example of method repeatability	19
Annex E (informative) Example of comparisons among 3 measurement techniques	20
Bibliography	22

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 281, *Fine bubble technology*.

A list of all parts in the ISO 21910 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
