Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the WTO principles in the Technical Barriers to Trade (TBT) see the following URL: [Foreword - Supplementary information](#)

The committee responsible for this document is ISO/TC 23, *Tractors and machinery for agriculture and forestry*, Subcommittee SC 4, *Tractors*.

This second edition cancels and replaces the first edition (ISO 23205:2006), of which has been technically revised.

Introduction

This International Standard is intended to guide the manufacturer who wishes to supply an instructional seat and restraint inside the enclosed cab of an agricultural tractor. Nevertheless, many types of agricultural tractors will not be able to accommodate this feature.

This International Standard is recognition that an instructional seat for a trainer or trainee or service person on an agricultural tractor can be useful when providing training or instruction, or to enable a second person to aid in problem diagnosis.

Agricultural tractors equipped with ROPS (rollover protective structure) cabs large enough to accommodate two persons — one seated in the operator's seat with restraint and the other, a trainer, trainee or service person, seated in the instructional seat with restraint — provide greater safety for both persons in a rollover than would be available without an instructional seat.
