1 Scope **1**

2 Normative references **1**

3 Terms and definitions **1**
3.1 General terms 1
3.2 Geometrical parameter terms 5
3.3 Geometrical feature terms 11

4 Field parameters **15**
4.1 General 15
4.2 Height parameters 15
4.2.1 General 15
4.2.2 Root mean square height 15
4.2.3 Skewness 15
4.2.4 Kurtosis 15
4.2.5 Maximum peak height 16
4.2.6 Maximum pit depth 16
4.2.7 Maximum height 16
4.2.8 Arithmetic mean height 16
4.3 Spatial parameters 16
4.3.1 General 16
4.3.2 Autocorrelation length 16
4.3.3 Texture aspect ratio 17
4.3.4 Texture direction 18
4.3.5 Dominant spatial wavelength 18
4.4 Hybrid parameters 18
4.4.1 General 18
4.4.2 Root mean square gradient 18
4.4.3 Developed interfacial area ratio 18
4.5 Material ratio functions and related parameters 19
4.5.1 Areal material ratio 19
4.5.2 Inverse areal material ratio 19
4.5.3 Material ratio height difference 20
4.5.4 Areal parameter for stratified surfaces 21
4.5.5 Areal material probability parameters 23
4.5.6 Void volume 24
4.5.7 Material volume 25
4.6 Gradient distribution 26
4.7 Multiscale geometric (fractal) methods 28
4.7.1 Morphological volume-scale function 28
4.7.2 Relative area 29
4.7.3 Relative length 29
4.7.4 Scale of observation 29
4.7.5 Volume-scale fractal complexity 29
4.7.6 Area-scale fractal complexity 29
4.7.7 Length-scale fractal complexity 30
4.7.8 Crossover scale 30

5 Feature parameters **30**
5.1 General 30
5.2 Type of texture feature 31
5.3 Segmentation 32
5.4 Determining significant features 32

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This second edition cancels and replaces the first edition (ISO 25178-2:2012), which has been technically revised. The main changes to the previous edition are described in Annex E.

A list of all parts in the ISO 25178 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

This document is a geometrical product specification (GPS) standard and is to be regarded as a general GPS standard (see ISO 14638). It influences the chain link B of the chains of standards on areal surface texture.

The ISO/GPS matrix model given in ISO 14638 gives an overview of the ISO/GPS system of which this document is a part. The fundamental rules of ISO/GPS given in ISO 8015 apply to this document and the default decision rules given in ISO 14253-1 apply to the specifications made in accordance with this document, unless otherwise indicated.

For more detailed information of the relation of this document to other standards and the GPS matrix model, see Annex I. An overview of standards on profiles and areal surface texture is given in Annex H.

This document develops the terminology, concepts and parameters for areal surface texture.

Throughout this document, parameters are written as abbreviations with lower-case suffixes (as in Sq or Vmp) when used in a sentence and are written as symbols with subscripts (as in S_q or V_{mp}) when used in formulae, to avoid misinterpretations of compound letters as an indication of multiplication between quantities in formulae. The parameters in lower case are used in product documentation, drawings and data sheets.

Parameters are calculated from coordinates defined in the specification coordinate system, or from derived quantities (e.g. gradient, curvature).

Parameters are defined for the continuous case, but in verification they are calculated on discrete surfaces such as the primary extracted surface.

A short history of the work done on areal surface texture can be found in Annex C.

Geometrical product specifications (GPS) — Surface texture: Areal —

Part 2: Terms, definitions and surface texture parameters

1 Scope

This document specifies parameters for the determination of surface texture by areal methods.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 16610-1:2015, *Geometrical product specifications (GPS) — Filtration — Part 1: Overview and basic concepts*

ISO 17450-1:2011, *Geometrical product specifications (GPS) — General concepts — Part 1: Model for geometrical specification and verification*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 16610-1:2015 and ISO 17450-1:2011 and the following apply.

ISO 25178-2:2021
https://standards.iteh.ai/catalog/standards/iso/743744d0-8174-4697-9179-0cf33c31ea7b/iso-25178-2-2021

ISO and IEC maintain terminology databases for use in standardization at the following addresses:

— ISO Online browsing platform: available at https://www.iso.org/obp

— IEC Electropedia: available at https://www.electropedia.org/

3.1 General terms

3.1.1
skin model
<of a workpiece> model of the physical interface of the workpiece with its environment

[SOURCE: ISO 17450-1:2011, 3.2.2]

3.1.2
surface texture
<areal> geometrical irregularities contained in a *scale-limited surface* (3.1.9)

Note 1 to entry: Surface texture does not include those geometrical irregularities contributing to the form or shape of the surface.
