Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Combustion conditions	3
4.1 General	3
4.2 Thermal environment	3
4.3 Ventilation	3
4.4 Characteristics of test specimens	4
5 Toxic gas data	4
5.1 Identification of toxic species	4
5.2 Different expressions for toxic gas data	4
5.2.1 General	4
5.2.2 Yields	5
5.2.3 Concentrations of toxicants	6
5.2.4 The contribution to FED (or FEC) from individual toxicants	6
5.2.5 Lethal toxic potency	6
5.2.6 Total amount of toxicant released	6
5.2.7 Production rates	6
5.3 Significance of analysis data	7
5.3.1 General	7
5.3.2 Limit of detection (LoD)	7
5.3.3 Measurement uncertainty	7
6 Comparison/prediction of toxic gas data from different physical fire models	7
6.1 General	7
6.2 Comparison principles	8
6.2.1 Fire stages	8
6.2.2 CO/CO ₂ -ratio	8
6.2.3 Equivalence ratio	8
6.3 Comparison methodology	9
6.3.1 General	9
6.3.2 Assessment of available data	10
6.3.3 Comparison of data	10
6.3.4 Assessment of agreement	10
6.4 Prediction of data from one fire model to another	11
7 Documentation	11
Annex A (informative) Characteristics of physical fire models	13
Annex B (informative) Influence of sampling and analysis on toxic gas data	16
Bibliography	18

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 92, *Fire safety*, Subcommittee SC 3, *Fire threat to people and environment*.

This first edition of ISO 29903-1 cancels and replaces the first edition (ISO 29903:2012), which has been technically revised.

The main changes compared to the previous edition are as follows:

- ISO 29903 has been divided into two parts: ISO 29903-1 (this document) and ISO 29903-2.
- Subclause 4.4 has been revised to include requirements on the identity and properties of test specimens.
- Annex C from ISO 29903 (previous edition) (application examples) has been deleted. Application examples will instead be put in a separate document in the ISO 29903 series.

A list of all parts in the ISO 29903 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
