Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

International Standards are drafted in accordance with the rules given in the ISO/IEC Directives, Part 3.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

Attention is drawn to the possibility that some of the elements of this part of ISO 3272 may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights.

International Standard ISO 3272-6 was prepared by Technical Committee ISO/TC 171, *Document imaging applications*, Subcommittee SC 2, *Application issues*.

ISO 3272 consists of the following parts, under the general title *Microfilming of technical drawings and other drawing office documents*:

- Part 1: *Operating procedures*
- Part 2: *Quality criteria and control of 35 mm silver gelatin microfilms*
- Part 3: *Unitized aperture card for 35 mm microfilm*
- Part 4: *Microfilming of drawings of special and exceptional elongated sizes*
- Part 5: *Test procedures for diazo duplicating of microfilm images in aperture cards*
- Part 6: *Quality criteria and control of systems for enlargements from 35 mm microfilm*

Annex A of this part of ISO 3272 is for information only.

Introduction

This part of ISO 3272 gives guidance on methods of producing enlargements from microfilm in accordance with ISO 3272-1.
