
**Hydrometry — Open channel flow
measurement using triangular
profile weirs**

*Hydrométrie — Mesure de débit des liquides dans les canaux
découverts au moyen de déversoirs à profil triangulaire*

Foreword	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Symbols	1
5 Principle	2
6 Installation	2
6.1 General.....	2
6.2 Selection of site.....	2
6.3 Installation conditions.....	3
6.3.1 General.....	3
6.3.2 Measuring structure.....	4
6.3.3 Approach channel.....	5
6.3.4 Downstream channel.....	5
7 Maintenance	6
8 Measurement of head(s)	6
8.1 General.....	6
8.2 Location of head measurement(s).....	6
8.2.1 Modular (free) flow.....	6
8.2.2 Non-modular (drowned) flow.....	6
8.3 Gauge wells.....	7
8.4 Zero setting.....	9
8.5 Dimensions.....	10
9 Discharge characteristics	10
9.1 Formulae of discharge.....	10
9.1.1 Modular (free) flow.....	10
9.1.2 Non-modular flow.....	11
9.2 Coefficients.....	11
9.2.1 Coefficient of discharge, C_d	11
9.2.2 Coefficient of velocity for modular flow, C_v	11
9.2.3 Non-modular flow reduction factor, f , with crest tappings.....	11
9.2.4 Non-modular flow reduction factor, f , with tailwater recorder.....	11
9.3 Limitations.....	12
10 Uncertainties of flow measurement	12
10.1 General.....	12
10.2 Combining measurement uncertainties.....	13
10.3 Uncertainty of discharge coefficient $u(C_d)$ for the triangular profile weir.....	14
10.4 Uncertainty budget.....	14
11 Example	15
11.1 General.....	15
11.2 Characteristics — Gauging structure.....	15
11.3 Characteristics — Gauged head instrumentation.....	15
11.4 Discharge coefficient.....	15
11.5 Discharge calculation.....	16
11.6 Uncertainty statement.....	16
Annex A (informative) Introduction to measurement uncertainty	18
Annex B (informative) Sample measurement performance for use in hydrometric worked examples	26
Annex C (informative) Spreadsheet for use with this document	29

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 113, *Hydrometry*, Subcommittee SC 2, *Flow measurement structures*.

This fourth edition cancels and replaces the third edition (ISO 4360:2008), which has been technically revised.

The main changes compared to the previous edition are as follows.

- The calculations and examples have been updated to correct an error in the previous edition.
- A URN has been added containing a spreadsheet that has been developed to support the standard and facilitate calculation of discharge and uncertainty (see [Annex C](#)).

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
