Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms, definitions and symbols	1
3.1 Terms and definitions	1
3.2 Symbols	2
4 Outline of the calculation	3
4.1 Liquefied petroleum gas	3
4.2 Liquefied natural gas	4
4.3 Data for calculation	5
5 Mass	5
5.1 Mass of liquid phase	5
5.2 Correction for vapour phase	6
5.3 Mass in vacuum to mass in air	6
6 Energy content (calorific content)	7
7 Inter-conversion of liquid mass and vapour volume at standard conditions	8
8 Calculation of liquid density from composition	8
8.1 General	8
8.2 Liquid petroleum gas	8
8.3 Liquid natural gas	9
9 Calculation of calorific value from composition	9
9.1 Volumetric basis	9
9.2 Mass basis	9
Annex A (informative) Molar volume of individual component	10
Annex B (informative) Correction factors for volume reduction of LNG mixtures	11
Annex C (informative) Gross calorific values for individual components	12
Annex D (informative) Molar mass, compression factor and summation factor of individual component	13
Annex E (informative) Calculation examples	14
Bibliography	19

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 28, *Petroleum and related products, fuels and lubricants from natural or synthetic sources*, Subcommittee SC 5, *Measurement of refrigerated hydrocarbon and non-petroleum based liquefied gaseous fuels*.

This third edition cancels and replaces the second edition (ISO 6578:2017), which has been technically revised.

The main changes are as follows:

- [Table D.1](#) has been aligned with ISO 6976:2016;
- calculation examples have been moved from the main body to [Annex E](#).

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
