Foreword	iv
Introduction	vi
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Requirements	3
4.1 Appearance	3
4.2 Length	3
4.3 Designation and nominal size	4
4.4 Tolerances	4
4.5 Colour-coding	4
4.6 Taper	4
4.7 Carrier-based obturating device	7
4.8 Physical integrity	8
4.9 Radiopacity	8
5 Procurement of samples	8
6 Measurement and test methods	8
6.1 Test conditions	8
6.2 Visual examination	8
6.2.1 General	8
6.2.2 Interpretation of the results	9
6.3 Length	9
6.3.1 Apparatus	9
6.3.2 Method	9
6.3.3 Interpretation of the results	9
6.4 Taper measurements	9
6.4.1 Apparatus	9
6.4.2 Method for taper of standard and greater taper points	9
6.4.3 Interpretation of the results	10
6.5 Physical integrity	10
6.5.1 General	10
6.5.2 Apparatus	10
6.5.3 Method	10
6.5.4 Interpretation of the results	10
6.6 Radiopacity	11
6.6.1 General	11
6.6.2 Apparatus	11
6.6.3 Method	12
6.6.4 Interpretation of the results	12
6.7 Melt mass-flow rate	12
7 Product information	12
7.1 Labelling	12
7.2 Marking	13
7.3 Packaging	13
7.4 Instruction for use	13
Annex A (normative) Melt mass-flow rate test	16
Bibliography	19

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity, or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO-specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 106, *Dentistry*, Subcommittee SC 1, *Filling and restorative materials*, in collaboration with the European Committee for Standardization (CEN) Technical Committee CEN/TC 55, *Dentistry*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

This fourth edition cancels and replaces the third edition (ISO 6877:2021), which has been technically revised.

The main changes compared to the previous edition are as follows:

- elimination of metallic points (cones);
- inclusion of tolerances d_3 and d_{16} for standard, greater taper, and variable taper points;
- change of terminology from "numbering system" to "nominal size";
- modification of [Table 1](#);
- addition of [Table 2](#);
- modification of [Figure 1](#) and [Figure 2](#);
- inclusion of requirements to state the initial taper and its length for variable taper points;
- inclusion of requirements to state the taper and tolerances for auxiliary points;
- addition of a new normative reference;
- removal of inappropriate requirements for carrier-based obturation devices;
- modification of the carrier-based obturation device drawing.
