| <b>Foreword</b>                                                                      | <b>iv</b> |
| <b>Introduction</b>                                                                  | <b>v</b>  |
| <b>1 Scope</b>                                                                       | <b>1</b>  |
| <b>2 Normative references</b>                                                        | <b>1</b>  |
| <b>3 Terms and definitions</b>                                                       | <b>1</b>  |
| <b>4 Cavitation erosion</b>                                                          | <b>1</b>  |
| 4.1 Mechanism of cavitation erosion                                                  | 1         |
| 4.2 Classification of cavitation erosion                                             | 4         |
| 4.3 General countermeasures against cavitation erosion                               | 6         |
| <b>5 Five types of cavitation erosion</b>                                            | <b>7</b>  |
| 5.1 General                                                                          | 7         |
| 5.2 Flow cavitation erosion                                                          | 7         |
| 5.2.1 Typical damage appearance                                                      | 7         |
| 5.2.2 Possible causes                                                                | 8         |
| 5.2.3 Possible countermeasures                                                       | 8         |
| 5.2.4 Typical examples (see <a href="#">Figures 4 to 8</a> )                         | 8         |
| 5.3 Impact cavitation erosion                                                        | 10        |
| 5.3.1 Typical damage appearance                                                      | 10        |
| 5.3.2 Possible causes                                                                | 10        |
| 5.3.3 Possible countermeasures                                                       | 10        |
| 5.3.4 Typical examples (see <a href="#">Figures 9 to 11</a> )                        | 11        |
| 5.4 Suction cavitation erosion                                                       | 12        |
| 5.4.1 Typical damage appearance                                                      | 12        |
| 5.4.2 Possible causes                                                                | 12        |
| 5.4.3 Possible countermeasures                                                       | 12        |
| 5.4.4 Typical examples (see <a href="#">Figures 12 to 14</a> )                       | 13        |
| 5.5 Discharge cavitation erosion                                                     | 14        |
| 5.5.1 Typical damage appearance                                                      | 14        |
| 5.5.2 Possible causes                                                                | 14        |
| 5.5.3 Possible countermeasures                                                       | 14        |
| 5.5.4 Typical examples (see <a href="#">Figures 15 to 16</a> )                       | 14        |
| 5.6 Miscellaneous cavitation erosion (see <a href="#">Figures 17 to 20</a> )         | 15        |
| 5.6.1 Cavitation erosion caused by high-frequency vibration ("Vibration cavitation") | 15        |
| 5.6.2 Cavitation erosion by elastic bearing deformation or abnormal combustion       | 15        |
| 5.6.3 Rippling or roughening (see <a href="#">Figures 19 and 20</a> )                | 15        |

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see [www.iso.org/patents](http://www.iso.org/patents)).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 123, *Plain bearings*, Subcommittee SC 2, *Materials and lubricants, their properties, characteristics, test methods and testing conditions*.

This second edition cancels and replaces the first edition (ISO 7146-2:2008), of which it constitutes a minor revision. The changes compared to the previous edition are as follows:

— Adjustment to the ISO Directives, including the replacement of "may" with "can" throughout.

A list of all parts in the ISO 7146 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).
