
**Water quality — Determination of free
chlorine and total chlorine —**

**Part 2:
Colorimetric method using *N,N*-
dialkyl-1,4-phenylenediamine, for
routine control purposes**

Qualité de l'eau — Dosage du chlore libre et du chlore total —

*Partie 2: Méthode colorimétrique à la N,N-dialkylphénylène-1,4
diamine destinée aux contrôles de routine*

Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	2
4 Principle	2
4.1 Determination of free chlorine	2
4.2 Determination of total chlorine	3
5 Interferences	3
5.1 General	3
5.2 Interference by other chlorine compounds	3
5.3 Interference by compounds other than chlorine compounds	3
5.4 Interference due to the presence of oxidized manganese	3
5.5 Interference due to turbid and coloured samples	4
6 Reagents	4
7 Apparatus	6
8 Sampling	7
9 Procedure	7
9.1 Test sample	7
9.2 Test portions	7
9.3 Calibration	7
9.4 Determination of free chlorine	7
9.5 Determination of total chlorine	8
10 Calculation	9
10.1 Calculation of the free chlorine concentration	9
10.2 Calculation of the total chlorine concentration	9
10.3 Conversion of amount of substance concentration to mass concentration	9
11 Expression of results	9
12 Test report	9
Annex A (informative) Separate determinations of combined chlorine of the monochloramine type, combined chlorine of the dichloramine type and of combined chlorine in the form of nitrogen trichloride	11
Annex B (informative) Performance data	14
Annex C (informative) Disposable planar reagent-filled cuvettes using a mesofluidic channel pump/colorimeter	17
Bibliography	19

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 147, *Water quality*, Subcommittee SC 2, *Physical, chemical and biochemical methods*.

This second edition cancels and replaces the first edition (ISO 7393-2:1985), which has been technically revised.

The main changes compared to the previous edition are as follows:

- a new [Annex C](#) has been included with the title: Disposable planar reagent-filled cuvettes using a mesofluidic channel pump/colorimeter.

A list of all parts in the ISO 7393 series can be found on the ISO website.
