
**Tyres for agricultural tractors and
machines — Code-designated and
service-description marked radial
drive-wheel tyres**

*Pneumatiques pour tracteurs et machines agricoles — Pneumatiques
radiaux pour roues motrices portant une désignation de dimension
par code et une description d'utilisation*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 31, *Tyres, rims and valves*, Subcommittee SC 5, *Agricultural tyres and rims*.

This third edition cancels and replaces the second edition (ISO 8664:2005), which has been technically revised. It also incorporates the Amendment ISO 8664:2005/Amd1:2010. The main changes compared to the previous edition are as follows:

- information already contained in other International standards has been removed and replaced with normative references to these standards;
- A6 speed symbol for radial code designated tyres has been deleted;
- the document has been aligned with other standards developed by SC 5 and with existing regulations;
- the values of SRI have been updated to the most recent data as given by ETRTO;
- approved rim contours have been added (Table C.1).
