Foreword	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Symbols and abbreviated terms	1
4.1 Symbols	1
4.2 Abbreviations	2
5 General considerations	3
5.1 Importance of backwater	3
5.2 Backwater conditions	3
5.3 Gauging requirements	3
5.4 Types of stage-fall-discharge relationships	4
6 Unit-fall method	4
6.1 General	4
6.2 Method of analysis	5
6.3 Computation of discharge	5
6.4 Example of unit-fall method	5
7 Constant-fall method	7
7.1 General	7
7.2 Method of analysis	7
7.3 Computation of discharge	7
7.4 Example of constant-fall method	7
8 Variable-fall method	10
8.1 General	10
8.2 Normal-fall method	11
8.3 Limiting-fall method	11
8.3.1 General	11
8.3.2 Method of analysis	11
8.3.3 Computation of discharge	11
8.3.4 Example of limiting-fall method	12
9 Rating curves and tables	16
10 Method of computation	16
11 Periodic checking of stage-fall-discharge ratings	16
12 Extrapolations	16
13 Evaluation of uncertainty in the stage-fall-discharge relation	16
13.1 General	16
13.2 Implementing the GUM procedure for evaluating uncertainty in the stage-fall-discharge relation and derived estimates	17
13.2.1 General	17
13.2.2 Propagation of uncertainty for stage-fall-discharge estimates	17
13.2.3 Uncertainty in rating curve	18
13.2.4 Uncertainty in the measured stage	21
13.2.5 Uncertainty in the measured fall	21
13.2.6 Prediction intervals of estimated discharge	21
13.2.7 Uncertainty caused by neglecting all other physical parameters	21
13.3 Example	22
13.3.1 General	22
13.3.2 Standard error of estimate	23
13.3.3 Uncertainty of mean response	23

13.3.4	Uncertainty in measured stage and fall.....	24
13.3.5	Uncertainty caused by neglecting all other physical parameters.....	24
13.3.6	Propagation of uncertainty in discharge estimation.....	24
13.3.7	Uncertainty in the predicted discharge.....	25
Annex A (informative) Multiple least squares regression — Matrix representation		27
Bibliography		29

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html

This document was prepared by Technical Committee ISO/TC 113, *Hydrometry*, Subcommittee SC 1, *Velocity area methods*.

This second edition cancels and replaces the first edition (ISO 9123:2001), which has been technically revised. The main changes were to improve the text relating to the stage-fall-discharge method and to revise the previous clause on uncertainty in accordance with HUG/GUM and similar related standards on the estimation of uncertainty in flow measurements.
