C.5.1 General.....58

C.5.2 Procedure.....58

C.5.2.1 Generate the minimum and maximum envelope spectrum from the measured acoustic rail roughness wavelength spectra of the two test situations (step 1).....58

C.5.2.2 Quantify the differences in the acoustic rail roughness frequency spectra (step 2).....59

C.5.2.3 Calculate the revised noise spectra (step 3).....60

C.5.2.4 Maximum influence of roughness variation on the noise level.....60

Annex D (normative) Method to assess acceptable small deviations from acoustic rail roughness requirements.....61

D.1 Principle.....61

D.2 Data Processing.....61

D.2.1 Generate a “just compliant” corrected spectrum from the measured acoustic rail roughness wavelength spectrum (step 1).....61

D.2.2 Quantify the deviations in the acoustic rail roughness frequency spectrum (step 2).....62

D.2.3 Calculate a revised noise spectrum (step 3).....62

D.3 Acceptance criterion.....62

Annex E (informative) Guidance for urban rail vehicles measurement.....63

E.1 General.....63

E.2 Rail acoustic roughness.....63

E.3 Track decay rates.....63

E.4 Track design.....63

E.5 Propagation conditions.....64

E.6 How to handle high background noise levels?.....64

Annex F (informative) Additional measurements.....65

F.1 Additional measurements of noise at platforms and stopping points.....65

F.1.1 General.....65

F.1.2 Measurement position.....65

F.1.3 Vehicle conditions.....65

F.2 Additional noise measurements on bridges and other elevated structures in concrete bridge sections.....65

F.2.1 General.....65

F.2.2 Measurement position.....66

F.2.3 Measurement conditions.....67

F.3 Additional interest in curving noise.....67

F.3.1 General.....67

F.3.2 On-board measurements.....69

F.3.3 Trackside measurements.....70

Annex G (informative) Quantification of measurement uncertainties according to ISO/IEC Guide 98-3:2008^[1].....71
