## Contents

Foreword.....	iv
Introduction.....	v
1 Scope.....	1
2 Normative references.....	2
3 Terms and definitions.....	2
3.1 Terms related to the forest value chain.....	2
3.2 Terms related to remote sensing technology.....	5
3.3 Terms related to the accuracy of remote sensing technology.....	6
4 Forest management documentation and relevant data required from the responsible party .....	7
4.1 Understanding of the native forest area.....	7
4.2 Following an approved forest management plan .....	8
4.3 Chain of custody traceability .....	10
5 Information sources and technologies – Independent georeferenced information derived from remote sensing (and its accuracy requirements) .....	10
5.1 Consistency checking of the remote sensing technologies availability in the geospatial industry .....	10
5.2 Consistency checking of the remote sensing technologies detection’s relevant capacity..	11
6 Consistency checking procedures.....	12
6.1 General.....	12
6.2 Consistency of georeferenced data provided by the responsible party.....	13
6.3 Consistency of the production area’s spatial pattern .....	13
7 Claims.....	14
8 Requirements for whistleblowing .....	14
Bibliography .....	15

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives-and-policies.html](http://www.iso.org/directives-and-policies.html)).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at [www.iso.org/patents](http://www.iso.org/patents). ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 287, *Sustainable processes for wood and wood-based products*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).
