Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Requirements	2
4.1 Symbology characteristics	2
4.2 Symbol structure	2
4.2.1 Symbol types	2
4.2.2 Symbol encodation	2
4.2.3 Symbol formats	4
4.3 Dimensions and tolerances	12
4.3.1 Measurement basis	12
4.3.2 Width of narrow element (X)	12
4.3.3 Bar height	12
4.3.4 Quiet zone	12
4.3.5 Positioning of the add-on symbol	13
4.3.6 Element widths	13
4.3.7 Symbol width	13
4.3.8 Symbol size	14
4.3.9 Dimensional tolerances	14
4.4 Reference decode algorithm	14
4.5 Symbol quality	18
4.5.1 Test methodology	18
4.5.2 Decodability	19
4.5.3 Additional criteria	19
4.6 Application-defined parameters	20
4.7 Human-readable interpretation	20
4.8 Transmitted data	20
4.9 Implementation guidelines	20
Annex A (normative) Additional features	21
Annex B (normative) Symbology identifier	23
Annex C (informative) Overview of the GS1 system	24
Annex D (informative) Illustration of number sets A, B and C and auxiliary patterns	25
Annex E (informative) Dimensioned drawings of the nominal size symbols	28
Annex F (informative) Traditional dimensional tolerances	33
Annex G (informative) Guidelines for reading and printing	35
Bibliography	37

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives or www.iec.ch/members_experts/refdocs).

ISO and IEC draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO and IEC take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO and IEC had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents and <https://patents.iec.ch>. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html. In the IEC, see www.iec.ch/understanding-standards.

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 31, *Automatic identification and data capture techniques*.

This third edition cancels and replaces the second edition (ISO/IEC 15420:2009), which has been technically revised.

The main changes are as follows:

- terminology and dimensions have been updated to align with latest GS1 General Specifications;
- clarification on what is defined in this document compared to an application standard has been added;
- example barcodes have been revised to use GS1 company prefixes reserved for examples;
- verification lighting has been changed from 670 nm to 660 nm to align with GS1 General Specifications.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html and www.iec.ch/national-committees.

Introduction

The technology of bar coding is based on the recognition of patterns encoded in bars and spaces of defined dimensions. There are numerous methods of encoding information in bar code form, known as symbologies. EAN/UPC is one such symbology. The rules defining the translation of characters into bar and space patterns, and other essential features of each symbology, are known as the symbology specification.

This document is intended to be used alongside the GS1 General Specifications. The administration of the numbering system by GS1 ensures that identification codes assigned to particular items are unique worldwide and are defined in a consistent way. The major benefit for the users of the GS1 system¹⁾ is the availability of uniquely defined identification codes for use in their trading transactions. [Annex C](#) gives an overview of the GS1 system.

NOTE GS1 is the worldwide association encompassing the organizations formerly known as EAN International and Uniform Code Council (UCC).

Manufacturers of bar code equipment and users of bar code technology require publicly available standard symbology specifications to which they can refer when developing equipment and software.
