4 Concepts

4.5 SQL-property graphs

4.5 Pure property graph

1. *Rationale:* Correct the use of terms related to labels.

Replace the second subitem of the fourth item of the second paragraph with:

- ...
 - ...
 - ...
 - ...
 - ...
 - An indication whether the edge triplet describes directed edges or undirected edges.
- Case:
- If the edge triplet describes directed edges, then:
 - a *source vertex defined label set*, which is a subset of a vertex defined label set;
 - a *destination vertex defined label set*, which is a subset of a vertex defined label set.
 - If the edge triplet describes undirected edges, then:
 - a pair of *endpoint vertex defined label sets*, each of which is a subset of a vertex defined label set.

6 Scalar expressions

6 <identifier chain>

1. *Rationale:* Augment the correct Rule.

Replace Syntax Rule 2) with:

- 2) Augment SR 8) by adding “a property *PR*” to the list of possible referents of a basis.
