Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents. ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*.

A list of all parts in the ISO 25005 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

This document aims to provide common considerations about data use in smart cities based on the analysis of collected use cases.

The objectives and implications of this document are:

- to support effective, sustainable, comprehensive and innovative use of data as strategic resource city-wide for better performance, operation, service and sustainability of city;
- to support human-centred standardization collaboration on data use for better harmonization, connectivity, interoperability and reusability of data as strategic resources and asset in digital transformation of city;
- to synthesize common considerations that enable data availability, data usefulness, data connectivity, data security, and data enabled intelligent predictions and actions from city wide multi-stakeholder's interests from collected use cases;
- to collect good practices that enable mapping, building, operating, assessing and continuous improvement of data use in ICT development and applications, investment, procurement, monitoring, auditing and performance assessment;
- to improve digital enhancement of total capabilities of data use and evidence-based decision making in smart cities such as data use for public health emergency and control across multi-dimensions, multi-domains, multi-layers and multi-regions;
- to support data-based and data-driven and data-enabled ICT development and applications in smart cities including but limited to digital governance, legal governance, data quality governance, ICT governance, data security governance, smart governance, etc;
- to support the appropriate use of rights related to data distributed within and between cities, including intellectual property rights and privacy data derived from human rights.

Information technology — Data use in smart cities —

Part 2: Use case analysis and common considerations

1 Scope

This document provides use cases, common considerations for use cases analysis for data use in smart cities.

In particular, this document includes:

- a) collected use cases;
- b) methods of analyzing the collected use cases about data use in smart cities;
- c) common considerations about data use in smart cities based on the analysis of collected use cases.

2 Normative references

There is no normative reference in this document.

3 Terms and definitions

For the purposes of this document, the terms and definitions given in the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

— ISO Online browsing platform: available at <https://www.iso.org/obp>

— IEC Electropedia: available at <https://www.electropedia.org/>

3.1

data use

handling or dealing with data for a specific purpose

Note 1 to entry: In smart cities, data use refers to activities enabling data value realization along with data value-chain, including data availability, data qualifiability, ease of data use, data use security, and data-enabled innovation from city wide multi-stakeholder's interests.

[SOURCE: ISO/IEC 5207:2024, 3.30, modified — Note 1 to entry is changed.]

3.2

data value chain

intelligent use, management and reuse of data to deliver insight

Note 1 to entry: Data value chain in this document includes data availability, data qualifiability, ease of data use, data use security, and data enabled innovation for intelligent predictions and actions from city wide multi-stakeholder's interests.

[SOURCE: ISO/IEC 17917:2024, 2.5, modified — Note 1 to entry is added.]
