About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

CONTENTS

FOREWORD	5
INTRODUCTION	7
1 Scope	10
2 Normative references	10
3 Terms and definitions	10
4 Abbreviated terms	14
5 Context setting	15
5.1 Context for transactive issues	15
5.2 Report contents and organization	16
5.3 The problem	16
5.4 Time scales	18
5.5 Economic/market context	19
5.6 Grid control systems context	20
6 Transactive energy	22
6.1 Transition from central power generation	22
6.2 Transactive energy definition	23
6.3 Transactive energy attributes	23
6.4 Transactive energy principles	24
6.5 Evolution of the grid and its effects on transactive energy	25
6.6 Strata of transactive energy	26
7 Framework	27
7.1 The elements of transactive energy	27
7.2 Policy and market design	28
7.3 Business models and value realization	32
7.3.1 Overview	32
7.3.2 Overview of DER services and technical capabilities	33
7.3.3 DER services and values recognized today	35
7.3.4 DER values not yet recognized and quantified	39
7.3.5 Transactive markets and peer-to-peer transactions	42
7.3.6 Distribution system operator	42
7.3.7 Distribution system operator models	42
7.3.8 Summary: redefining the value of the grid	44
7.4 Conceptual architecture guidelines	44
7.4.1 Creating a conceptual architecture	44
7.4.2 Guiding architectural principles	45
7.4.3 Scope of the conceptual architecture for transactive energy	46
7.4.4 Organizing paradigms	47
7.5 Cyber-physical infrastructure	50
7.5.1 Two cyber-physical networks	50
7.5.2 Understanding the electricity grid	50
7.5.3 Hierarchy of node levels	53
7.5.4 Node characteristics and responsibilities	54
7.5.5 Transaction train	55
Annex A (informative) Case studies	58
A.1 Use of case study template	58

A.2	Case study template	58
A.2.1	Title of the case study	58
A.2.2	Case study characteristics and objectives	58
A.2.3	Transactive energy attributes	58
A.2.4	Participating agencies and organizations	60
A.2.5	References for case study	60
Annex B	(informative) Pacific Northwest Smart Grid Demonstration	61
B.1	Project characteristics and objectives	61
B.2	Transactive energy attributes	61
B.2.1	Architecture	61
B.2.2	Extent	62
B.2.3	Transacting parties	62
B.2.4	Transaction	62
B.2.5	Transacted commodities	62
B.2.6	Temporal variability	63
B.2.7	Interoperability	63
B.2.8	Value discovery mechanisms	63
B.2.9	Value assignment	63
B.2.10	Alignment of objectives	64
B.2.11	Stability assurance	64
B.3	Participating agencies and organizations	64
B.4	References for case study	64
Annex C	(informative) American Electric Power gridSMART® smart grid demonstration	65
C.1	Project characteristics and objectives	65
C.2	Transactive energy attributes	65
C.2.1	Architecture	65
C.2.2	Extent	65
C.2.3	Transacting parties	65
C.2.4	Transactions	65
C.2.5	Transacted commodities	66
C.2.6	Temporal variability	66
C.2.7	Interoperability	66
C.2.8	Value discovery mechanisms	66
C.2.9	Value assignment	67
C.2.10	Alignment of objectives	67
C.2.11	Stability assurance	67
C.3	Participating agencies and organizations	67
C.4	References for case study	68

INTERNATIONAL ELECTROTECHNICAL COMMISSION

INFORMATION TECHNOLOGY – HOME ELECTRONIC SYSTEM (HES) APPLICATION MODEL –

Part 3-8: GridWise transactive energy framework

FOREWORD

- 1) ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.
- 2) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC and ISO National bodies.
- 3) IEC and ISO documents have the form of recommendations for international use and are accepted by IEC and ISO National bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC and ISO documents is accurate, IEC and ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC and ISO National bodies undertake to apply IEC and ISO documents transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC and ISO document and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC and ISO do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC and ISO marks of conformity. IEC and ISO are not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this document.
- 7) No liability shall attach to IEC and ISO or their directors, employees, servants or agents including individual experts and members of its technical committees and IEC and ISO National bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this ISO/IEC document or any other IEC and ISO documents.
- 8) Attention is drawn to the Normative references cited in this document. Use of the referenced publications is indispensable for the correct application of this document.
- 9) Attention is drawn to the possibility that some of the elements of this ISO/IEC document may be the subject of patent rights. IEC and ISO shall not be held responsible for identifying any or all such patent rights.

The main task of IEC and ISO technical committees is to prepare International Standards. However, a technical committee may propose the publication of a Technical Report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

ISO/IEC TR 15067-3-8, which is a Technical Report, has been prepared by subcommittee 25: Interconnection of information technology equipment, of ISO/IEC joint technical committee 1: Information technology.

The text of this Technical Report is based on the following documents:

Enquiry draft	Report on voting
JTC1-SC25/2944/DTR	JTC1-SC25/2965/RVDTR

Full information on the voting for the approval of this Technical Report can be found in the report on voting indicated in the above table.
