3 Terms and definitions	1
4 Abbreviated terms	2
5 Handling the risks	3
5.1 Risk categories	3
5.2 Performing the risk assessment	3
5.3 Risk assessment in the case of an RCS-specification	3
6 Assessment of the risks related to the safety of persons and goods during the vehicle life cycle	4
6.1 List of safety risks	4
6.2 Remarks related to the assessment of the safety risks	5
6.2.1 General	5
6.2.2 Potential overload of the electronic system of the moving vehicle	5
6.2.3 Illicit or malicious remote control of the vehicle or vehicles	5
6.2.4 Other safety risks resulting from cybersecurity issues or problems	6
6.2.5 Absence of consideration of the complete vehicle life cycle	6
7 Assessment of the cybersecurity risks related to the vehicle remote communication system	7
7.1 Cybersecurity risks	7
7.2 Remarks related to the assessment of the cybersecurity risks	7
7.2.1 General considerations related to cybersecurity risks	7
7.2.2 General considerations related to misuse prevention measures	7
8 Assessment of the risks associated to the fair competition among the concerned actors	8
8.1 List of competition risks	8
8.2 Remarks related to the assessment of the competition risks	8
8.2.1 Involved actors	8
8.2.2 Risk related to the monitoring of the market	8
8.2.3 Possible unique knowledge of the customer's behaviour through monitoring	9
8.2.4 Risks related to the development of new after-sales applications	10
8.2.5 Competition risks among manufacturers	10
9 Assessment of the risks related to the responsibility and liability of the concerned actors	10
10 Assessment of the risks related to the protection of the resources owned by the resource owner (data protection)	10
Annex A (informative) Template proposal for assessing a possible risk	11
Bibliography	12

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 22, *Road vehicles*, Subcommittee SC 31, *Data communication*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.
