Foreword	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Symbols and abbreviated terms	4
5 Operating principles and typical forms of trapped key interlocking system	5
5.1 General	5
5.2 Functional decomposition of a trapped key interlocking system	8
5.2.1 Isolation control	9
5.2.2 Intermediate transfer	12
5.2.3 Access control	13
6 General requirements for the design of Trapped Key interlocking device	13
6.1 General	13
6.2 Device architecture and positive mechanical action	13
6.3 Endurance/Strength	14
6.3.1 General	14
6.3.2 Resistance to shock and vibration	14
6.3.3 Mechanical life	14
6.3.4 Rotary actuators for access locks	14
6.3.5 Key retention	15
6.4 Systematics	15
6.5 Safety FMEA/FTA	15
6.6 Validating Performance Level	15
6.7 Design to minimize defeat	16
6.7.1 General	16
6.7.2 Scheme design for ease of use	16
6.7.3 Coded actuators	16
6.7.4 Reproduction of keys	16
6.8 Clearances and creepage distances	17
6.9 Isolation control	17
6.9.1 General	17
6.9.2 Direct mechanical action (Power interlocking)	17
6.9.3 Solenoid controlled switch	17
6.10 Access control	17
6.10.1 Escape release	17
6.10.2 Emergency release	18
6.10.3 Auxiliary release	18
7 System configuration	18
7.1 General	18
7.2 Key coding	18
7.3 Key transfer plan	19
7.4 System selection	19
7.4.1 General	19
7.4.2 Isolation control	19
7.4.3 Intermediate transfer	19
7.4.4 Access control	19
8 Information for use	19
Annex A (informative) Examples of trapped key interlock devices	20
Annex B (informative) FMEA analysis — Typical failure modes for consideration in trapped key systems	26

Annex C (informative) Safety functions and validation in accordance with ISO 13849-1 and ISO 13849-2	27
Annex D (informative) Selection of trapped key interlocking devices.....	29
Bibliography	30

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 199, *Safety of machinery*.
