Foreword	v
Introduction	vi
1 Scope	1
2 Normative references	2
3 Terms and definitions	2
4 Symbols and abbreviated terms	3
5 Parameters for which characterization is required or recommended for the different applications	4
5.1 General	4
5.2 General characterization of the QMS	5
5.3 Leak rate measurement and leak rate monitoring (helium leak)	5
5.4 Leak rate monitoring (air leak)	5
5.5 Leak rate monitoring (water leak)	6
5.6 Residual gas analysis	6
5.7 Outgassing rate measurement	7
6 Vacuum systems to characterize QMS	7
6.1 General	7
6.2 Vacuum system for characterization with single gas	8
6.2.1 Continuous expansion system (orifice flow system)	8
6.2.2 Calibration system according to ISO 3567:2012	8
6.2.3 <i>In situ</i> calibration system	8
6.3 Vacuum system for characterization with gas mixtures	9
6.3.1 Continuous expansion system (orifice flow system)	9
6.3.2 <i>In situ</i> calibration system for gas mixture	10
7 Characterization and calibration procedures	10
7.1 General	10
7.2 Mass resolution	11
7.3 Minimum detectable partial pressure (p_{MDPP})	12
7.4 Minimum detectable concentration (C_{MDC})	13
7.5 Dynamic range	13
7.6 Sensitivity and interference effect ratio	14
7.7 Linear response range	15
7.8 Relative sensitivity factor	15
7.9 Fragmentation pattern (cracking pattern)	16
7.10 Outgassing rate of QMS	16
7.11 Pumping speed of QMS	17
8 Measurement uncertainties	17
8.1 General	17
8.2 Uncertainty of mass resolution	18
8.3 Uncertainty of p_{MDPP}	18
8.4 Uncertainty of minimum detectable concentration (C_{MDC})	18
8.5 Uncertainty of dynamic range	18
8.6 Uncertainty of sensitivity	18
8.7 Uncertainty of linear response range	18
8.8 Uncertainty of relative sensitivity factor	18
8.9 Uncertainty of fragmentation factor	18
8.10 Uncertainties of outgassing rate and pumping speed	19
8.11 Long-term stability of characteristic parameters of QMS	19
9 Reporting results	19

Annex A (informative) Estimate of gas composition in the measurement chamber from known gas composition in the reservoir in front of a leak element under different flow conditions	21
Bibliography	23

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

This document was prepared by Technical Committee ISO/TC 112, *Vacuum technology*.
