EUROPEAN STANDARD
NORME EUROPÉENNE
EUROPÄISCHE NORM

DRAFT
prEN 16452

October 2025

ICS

Will supersede EN 16452:2015+A1:2019

English Version

Railway applications - Braking - Brake blocks

Applications ferroviaires - Freinage - Semelles de frein

Bahnanwendungen - Bremse - Bremsklötze

This draft European Standard is submitted to CEN members for enquiry. It has been drawn up by the Technical Committee CEN/TC 256.

If this draft becomes a European Standard, CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

This draft European Standard was established by CEN in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and United Kingdom.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

Warning : This document is not a European Standard. It is distributed for review and comments. It is subject to change without notice and shall not be referred to as a European Standard.

European foreword	6
5.1 Deviations from requirements	11
5.2 Functions.....	11
5.3 Operational criteria	11
6.1 General.....	13
6.2 Characterisation of brake blocks for locomotives and passenger vehicles (declaration of conformity)	13
6.3 Characterisation of brake blocks for freight wagons (declaration of conformity)	14
6.4 Dynamometer specification.....	16
7.1 Brake block characteristics.....	17
7.2 Frictional requirements for brake blocks	17
7.3 Static coefficient of friction	34
7.4 Extreme winter conditions (freight wagons).....	34
7.5 Locked brake (fusibility).....	35
7.6 Vehicle brake test	36
7.7 In-service assessment	37
7.8 Metal pick up	37
7.9 Influence on track circuit operation (shuntage)	38
8.1 General.....	38
8.2 Noise	38
8.3 Odour.....	38
8.4 Smoke, fumes and sparkling.....	39
8.5 Recycling and disposal.....	39
Annex A (normative) Summary of dynamometer test programs and acceptance criteria	40
Annex B (normative) General requirements for conducting dynamometer test programs.....	42
B.1 General.....	42
B.2 Rotation and ventilation conditions	42
B.3 Brake application timing t_s	42
B.4 Bedding-in	42
B.5 Wear.....	43
B.6 Roughness index of the wheel tread	43
B.7 Interruption of the tests	43
B.8 Temperatures.....	43
B.9 Wet conditions	44
B.10 Test of simulation of continuous braking	45
B.11 Test wheels.....	45
B.12 Documentation of brake tests	47
B.13 Other conditions.....	49

Annex C (normative) Composite brake blocks (K) (2 x Bg – 2 x Bgu – 1 x Bgu) – demonstration of friction properties for S and SS (S/SS) -braked freight wagons ($v_{\max} = 120$ km/h)	50
C.1 Test program – performance tests	50
C.2 Test program for additional performance test.....	54
C.3 Deviant conditions at the end of brake applications of performance test.....	55
C.4 Test program – simulation braking performance assessment S-brakes (only recommended)	55
C.5 Test Program – simulation braking performance assessment SS-brakes (only recommended)	57
C.6 Deviant conditions for the bedding-in of program C.4 and C.5	58
C.7 Dispersion range of mean coefficient of frictions	58
Annex D (normative) Composite brake blocks (LL) (2 x Bg – 2 x Bgu) – Demonstration of friction properties for S and SS (S/SS) -braked freight wagons ($v_{\max} = 120$ km/h)	63
D.1 Test program – performance tests	63
D.2 Test program for additional performance test.....	66
D.3 Deviant conditions at the end of brake applications of performance test.....	68
D.4 Test program – simulation of braking performance assessment S-brakes (only recommended)	68
D.5 Program – simulation of braking performance assessment SS-brakes (only recommended)	69
D.6 Deviant conditions for performance of program D.4 and D.5	70
D.7 Dispersion range of mean coefficient of frictions	70
D.8 LL blocks (interchangeable)	73
Annex E (normative) Composite brake blocks (K) (1 x Bg) – demonstration of friction properties for S and SS (S/SS) -braked freight wagons ($v_{\max} = 120$ km/h)	77
E.1 Test program - performance test.....	77
E.2 Deviant conditions for the performance of program E 1	81
E.3 Dispersion range of mean coefficient of frictions	81
Annex F (normative) Generic program for composite brake blocks – demonstration of friction properties.....	83
Annex G (normative) Generic program for composite brake blocks for freight application – demonstration of friction properties	90
G.1 General	90
G.2 Generic program – performance test for freight application	90
G.3 Definitions.....	93
G.4 Values to be determined in order to define the area of use	93
Annex H (normative) Composite brake blocks – dynamometer test program to detect the formation of metal pick-up at the brake block	96
H.1 Test program for freight wagons with brake blocks type K and LL	96

prEN 16452:2025 (E)

H.2	Deviant conditions for the performance of test Program H.1	98
H.3	Generic test program for vehicles tested according to Annex F	98
Annex I (normative)	Test run to demonstrate the extreme winter braking properties brake blocks K – LL for freight wagons	102
I.1	Test program to demonstrate the braking properties under severe snowy conditions	102
I.2	Values to be determined in order to define the area of use	105
I.3	Assessment of measurement data and pass/fail criteria	105
Annex J (normative)	Composite brake blocks – test program to simulate “locked brake”	107
J.1	Test program for freight wagons with brake blocks type K and LL and coaches with brake blocks type K	107
J.2	Generic program for applications not covered by J.1 with brake blocks type K	108
Annex K (normative)	Composite brake blocks – dynamometer test program to demonstrate the compatibility with track circuits	109
K.1	General	109
K.2	Short description of the measuring method used	109
K.3	Schematic diagram of test set up	110
K.4	Flow chart to perform test program	110
K.5	Preparation of the disc and the rollers	111
K.6	Preparation of the samples of brake block	111
K.7	Contamination of disc	112
K.8	Measurements	112
K.9	Assessment of the results	113
Annex L (informative)	Composite brake blocks – dynamometer test program – determination of static coefficient of friction	116
Annex M (normative)	Interchangeability, rejection lugs, critical dimensions, wear limit and markings	117
Annex N (normative)	Brake block shear and flexural strength tests	123
N.1	General	123
N.2	Shear strength test	123
N.3	Flexural strength test	124
Annex O (normative)	Limitation of permissible mechanical damage of brake blocks	126
O.1	General for in-service test	126
O.2	Cracked through to back-plate	126
O.3	Crumbling of the friction material	127
O.4	Metal pick-up	127
O.5	Detachment from back-plate	128
O.6	Cracks in the direction of wheel circumference	128
O.7	Detachment of the friction material	128

O.8	Interface with the brake block holder	129
Annex P (normative)	In-service assessment of brake block.....	130
P.1	General	130
P.2	Freight wagon	130
P.3	Coach	131
P.4	Locomotive.....	131
P.5	EMU-DMU.....	132
P.6	High-speed train.....	132
P.7	Description of areas to be monitored and additional measures.....	133
P.8	Pass/fail criteria	134
Annex Q (informative)	Complementary symbols and definitions	135
Annex R (normative)	Mechanical, physical and chemical characteristics	137
Annex S (informative)	Declaration of conformity.....	139
