This European Standard was approved by CENELEC on 2026-01-13. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Türkiye and the United Kingdom.

EN IEC 62083:2026 (E)**European foreword**

The text of document 62C/957/FDIS, future edition 3 of IEC 62083, prepared by SC 62C "Equipment for radiotherapy, nuclear medicine and radiation dosimetry" of IEC/TC 62 "Medical equipment, software, and systems" was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN IEC 62083:2026.

The following dates are fixed:

- latest date by which the document has to be implemented at national (dop) 2027-02-28 level by publication of an identical national standard or by endorsement
- latest date by which the national standards conflicting with the (dow) 2029-02-28 document have to be withdrawn

This document supersedes EN 62083:2009 and all of its amendments and corrigenda (if any).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

This document has been prepared under a standardization request addressed to CENELEC by the European Commission. The Standing Committee of the EFTA States subsequently approves these requests for its Member States.

Any feedback and questions on this document should be directed to the users' national committee. A complete listing of these bodies can be found on the CENELEC website.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

Medical device software - Requirements for the safety of radiotherapy treatment planning systems

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at <https://patents.iec.ch>. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 62083:2025 © IEC 2025

IEC 62083 has been prepared by IEC subcommittee 62C: Equipment for radiotherapy, nuclear medicine and radiation dosimetry, of IEC technical committee 62: Medical equipment, software, and systems. It is an International Standard.

This third edition cancels and replaces the second edition published in 2009. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

- modification of the title from Medical electrical system - Requirements for the safety of radiotherapy treatment planning systems, to Medical device software - Requirements for the safety of radiotherapy treatment planning systems;
- **adaptive radiotherapy** is added in **Clause 16**;
- the title reflects different implementations of **radiotherapy treatment planning systems**.

The text of this document is based on the following documents:

FDIS	Report on voting
62C/957/FDIS	62C/966/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn, or
- revised.

INTRODUCTION

A **radiotherapy treatment planning system** is used to simulate the application of **radiation** to a **patient**. An important function of **radiotherapy treatment planning system** is to provide estimates of **absorbed dose** distributions in tissue using a particular algorithm or series of algorithms. These estimations, referred in this document as **absorbed dose** distributions, are used by a **qualified person** in planning a **radiotherapy treatment** course.

This document recognizes that modern **radiotherapy treatment planning system** use off-the-shelf hardware with **manufacturer** written software and therefore concerns itself with the safety of **radiotherapy treatment** planning software that is type tested against the hardware configurations **specified** by the **manufacturer**. It is this combination of software and hardware that is referred to as the **radiotherapy treatment planning system** in this document.

The output of a **radiotherapy treatment planning system** is used by appropriately **qualified persons** for clinical decisions and for **treatment** delivery. Inaccuracies in the input data, the limitations of the algorithms, errors in the **treatment** planning process, or improper use of output data, can represent a safety **hazard** to **patients** should the resulting output data be used for **treatment** purposes. This document defines requirements to be compliant with by **manufacturers** in the design and development of a **radiotherapy treatment planning system** in order to provide protection against the occurrence of such **hazards**. It establishes the minimum requirements for the contents of the **accompanying documentation** that will permit the **operator** to make informed choices during the **treatment** planning process.

Generally, a **radiotherapy treatment planning system** does not have direct interface to the **patients**. Consequently, this document is written in an independent format rather than as a particular standard to **IEC 60601-1:2005**.

This document introduces the concept of ensuring consistency of machine calibration (MU/Dose conversion) between the **radiotherapy treatment planning system** and the delivery systems. Where a **medical electrical equipment** has the capability, a check of the consistency of the machine calibration can be performed prior to any **treatment** delivery to ensure a match between the plan and **medical electrical equipment** settings for reference conditions.

IEC 61217:2011 defines coordinate systems and movements, the marking of scales, their zero position, and the direction of movement with increasing value. While the provided coordinate system and movements defined in **IEC 61217:2011** is the preferred coordinate system, it was deemed more of a safety **risk** to force this coordinate system for use with equipment that was not IEC compliant. Hence the requirement that coordinates will be in the delivery machine's coordinate system.

IEC TR 63183:2019 provides guidelines on error and warning messages for software used in **radiotherapy**.

This third edition of this document considers many aspects of technology used by healthcare organizations. **Clause 16** has been designed to facilitate current practice between **radiotherapy treatment medical electrical equipment**, **image guided radiotherapy medical electrical equipment**, **radiotherapy treatment planning systems**, and Radiotherapy Treatment Management Systems. To pursue compatibility, the equipment standards for this equipment are being developed in parallel as much as possible to facilitate workflow communication.

In the case of **online adaptive radiotherapy** and **real-time adaptive radiotherapy**, **Clause 16** should be used in conjunction with other particular standards of the IEC 60601-2.

Type tests that are performed by the **manufacturer**, or **site tests** that are not necessarily performed by the **manufacturer**, are **specified** for each requirement. It is understood that **site tests** can be required from the **manufacturer**, per the agreement between the **manufacturer** and the **responsible organization**.

IEC 62083:2025 © IEC 2025

Given that before installation a [manufacturer](#) cannot provide [site test](#) data, data collected during site tests can be provided in a [site test](#) report with the [accompanying documentation](#) by those who test the [radiotherapy treatment planning system](#) at installation.

1 Scope

This document, with the inclusion of **type tests** and **site tests**, applies to the design, manufacture, installation, and maintenance of the **radiotherapy treatment planning system**.

This document applies to the communication of the **radiotherapy treatment planning system** with other devices

- used in medical practice,
- that imports data either through input by the **operator** or from other devices,
- that outputs data to other devices, and
- that is intended to be
 - for **normal use**, under the authority of appropriately **qualified persons**, by **operators** having the required skills and training,
 - used and maintained in accordance with the recommendations given in the **instructions for use**, and
 - used within the environmental conditions **specified** in the technical description.

This document applies to any software application that is used for the development, evaluation, or approval of a **treatment plan**, whether stand-alone or part of another system.

NOTE Such software applications include prescribing systems, **image registration**, contouring systems, **quality assurance** systems, plan analysis systems, or plan review systems.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
