

# SLOVENSKI STANDARD SIST ISO 50002-1:2025

01-december-2025

Nadomešča:  
SIST ISO 50002:2017

---

## Energetske presoje - 1. del: Splošne zahteve z napotki za uporabo

Energy audits - Part 1: General requirements with guidance for use

Zahteve z navodili za uporabo - Dopolnilo A2

Audits énergétiques - Partie 1: Exigences et recommandations de mise en œuvre

Ta slovenski standard je istoveten z: **ISO 50002-1:2025**

|----------------------------------------------------------------------------------------------|-----------|
| <b>Foreword</b>                                                                              | <b>iv</b> |
| <b>Introduction</b>                                                                          | <b>v</b>  |
| <b>1 Scope</b>                                                                               | <b>1</b>  |
| <b>2 Normative references</b>                                                                | <b>1</b>  |
| <b>3 Terms and definitions</b>                                                               | <b>1</b>  |
| <b>4 Principles of energy auditing</b>                                                       | <b>6</b>  |
| 4.1 General                                                                                  | 6         |
| 4.2 Competency                                                                               | 6         |
| 4.3 Confidentiality                                                                          | 6         |
| 4.4 Objectivity                                                                              | 6         |
| 4.5 Access to equipment, resources and information                                           | 6         |
| 4.6 Evidence-based approach                                                                  | 6         |
| 4.7 Risk-based approach                                                                      | 7         |
| 4.8 Communication                                                                            | 7         |
| <b>5 Performing an energy audit</b>                                                          | <b>7</b>  |
| 5.1 General                                                                                  | 7         |
| 5.2 Planning                                                                                 | 8         |
| 5.3 Opening meeting                                                                          | 10        |
| 5.4 Data collection                                                                          | 11        |
| 5.5 Measurement plan                                                                         | 12        |
| 5.6 Site visit                                                                               | 13        |
| 5.7 Analysis                                                                                 | 14        |
| 5.7.1 General                                                                                | 14        |
| 5.7.2 Analysis of current energy performance                                                 | 14        |
| 5.7.3 Identification of energy performance improvement opportunities                         | 14        |
| 5.7.4 Evaluation of energy performance improvement opportunities                             | 15        |
| 5.7.5 Prioritization of energy performance improvement actions                               | 15        |
| 5.8 Reporting                                                                                | 16        |
| 5.8.1 General                                                                                | 16        |
| 5.8.2 Report content                                                                         | 16        |
| 5.9 Closing meeting                                                                          | 17        |
| <b>6 Competence of the energy auditor</b>                                                    | <b>18</b> |
| 6.1 General                                                                                  | 18        |
| 6.2 Generic competence of energy auditors                                                    | 18        |
| 6.2.1 General                                                                                | 18        |
| 6.2.2 Energy audit principles, processes and methods                                         | 18        |
| 6.2.3 Energy audit standards and other references                                            | 18        |
| 6.2.4 Organization and its context                                                           | 19        |
| 6.2.5 Applicable legal requirements and other requirements                                   | 19        |
| 6.3 Energy specific competence of energy auditors                                            | 19        |
| 6.4 Generic competence of a lead energy auditor                                              | 20        |
| <b>Annex A (informative) Guidance on the use of this document</b>                            | <b>21</b> |
| <b>Annex B (informative) Applicability of this document to other International Standards</b> | <b>32</b> |
| <b>Annex C (informative) Sampling</b>                                                        | <b>36</b> |
| <b>Bibliography</b>                                                                          | <b>37</b> |

## ISO 50002-1:2025(en)

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of ISO document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see [www.iso.org/directives](http://www.iso.org/directives)).

ISO draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at [www.iso.org/patents](http://www.iso.org/patents). ISO shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see [www.iso.org/iso/foreword.html](http://www.iso.org/iso/foreword.html).

This document was prepared by Technical Committee ISO/TC 301, *Energy management and energy savings*.

This first edition cancels and replaces ISO 50002:2014, which has been technically revised.

The main changes are as follows:

- the terms and definitions have been aligned with ISO 50001:2018;
- new principles have been added;
- decarbonization options have been included in improvement opportunities (renewable energy and achievement of net zero);
- energy auditor competencies have been clarified.

A list of all parts in the ISO 50002 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at [www.iso.org/members.html](http://www.iso.org/members.html).
