CONTENTS

FOREWORD.....	4
INTRODUCTION.....	6
ACKNOWLEDGMENT.....	7
1 Scope.....	8
2 Normative references	9
3 Terms and definitions	9
4 Basic EMC concepts related to voltage unbalance.....	14
4.1 Compatibility levels	14
4.2 Planning levels.....	15
4.2.1 Indicative values of planning levels.....	15
4.2.2 Assessment procedure for evaluation against planning levels.....	15
4.3 Illustration of EMC concepts.....	16
4.4 Emission levels	17
5 General principles	18
5.1 Stage 1: simplified evaluation of disturbance emission	19
5.2 Stage 2: emission limits relative to actual system characteristics.....	19
5.3 Stage 3: acceptance of higher emission levels on a conditional basis.....	19
5.4 Responsibilities	19
6 General guidelines for the assessment of emission levels.....	20
6.1 Point of evaluation.....	20
6.2 Definition of unbalance emission level.....	20
6.3 Assessment of emission levels from unbalanced installations.....	21
7 General summation law	21
8 Emission limits for unbalanced installations in MV systems.....	22
8.1 Stage 1: simplified evaluation of disturbance emission	22
8.2 Stage 2: emission limits relative to actual system characteristics.....	23
8.2.1 Global emission to be shared between the sources of unbalance	23
8.2.2 Individual emission limits.....	24
8.3 Stage 3: acceptance of higher emission levels on a conditional basis.....	26
8.4 Summary diagram of the evaluation procedure.....	27
9 Emission limits for unbalanced installations in HV or EHV systems.....	29
9.1 Stage 1: simplified evaluation of disturbance emission	29
9.2 Stage 2: emission limits relative to actual system characteristics.....	29
9.2.1 Assessment of the total available power	29
9.2.2 Individual emission limits.....	30
9.3 Stage 3: acceptance of higher emission levels on a conditional basis.....	32
Annex A (informative) Guidance for setting planning levels and emission limits	33
Annex B (informative) Calculation examples for determining emission limits	38
Annex C (informative) List of principal letter symbols, subscripts and symbols.....	39
Bibliography.....	41

Figure 1 – Illustration of basic voltage quality concepts with time/ location statistics covering the whole system.....	17
Figure 2 – Illustration of basic voltage quality concepts with time statistics relevant to one site within the whole system.....	17
Figure 3 – Illustration of the emission vector $\underline{U}_{2i}/\underline{U}_1$ and its contribution to the measured unbalance at the point of evaluation.	20
Figure 4 – Example of a system for sharing global contribution at MV.....	23
Figure 5 – Diagram of evaluation procedure.....	28
Figure 6 – Determination of S_i for a simple HV or EHV system.....	29
Figure 7 – Determination of S_i for a meshed HV or EHV system	30
Figure A.1 – The reduction factor T_{uML} as a function of the factors k_m , k_s , and k_{sc}	36
Figure A.2 – Example of unbalance ratio measurement for a remote mine with largely motor loading.....	36
Table 1 – Compatibility levels for voltage unbalance in low and medium voltage systems reproduced from references IEC 61000-2-2 and IEC 61000-2-12	14
Table 2 – Indicative values of planning levels for voltage unbalance (negative-sequence component) in MV, HV and EHV power systems	15
Table 3 – Indicative value of exponent for the summation of general unbalanced installations	22
Table A.1 – Portion of unbalance for accounting for the system inherent asymmetries	34
Table A.2 – Summation of unbalance from different sources.....	35
Table A.3 – Range of values of planning levels given different parameters	37

INTERNATIONAL ELECTROTECHNICAL COMMISSION

ELECTROMAGNETIC COMPATIBILITY (EMC) –**Part 3-13: Limits –
Assessment of emission limits for the connection of
unbalanced installations to MV, HV and EHV power systems**

FOREWORD

- 1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
- 3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
- 4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
- 5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
- 6) All users should ensure that they have the latest edition of this publication.
- 7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
- 8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
- 9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

The main task of IEC technical committees is to prepare International Standards. However, a technical committee may propose the publication of a technical report when it has collected data of a different kind from that which is normally published as an International Standard, for example "state of the art".

IEC/TR 61000-3-13, which is a technical report, has been prepared by subcommittee 77A: Low frequency phenomena, of IEC technical committee 77: Electromagnetic compatibility.

It has the status of a basic EMC publication in accordance with IEC Guide 107 [12]¹.

This first edition of this technical report has been harmonised with IEC/TR 61000-3-6 [10] and IEC/TR 61000-3-7 [11].
